Calories burned today

Estimates for your 97 kg body weight, as ranges.

Part	Calories
Warm-up + cooldown	30-40
Lifting (60 min)	350-450
Bike sprints (8 min)	70-100
Total today	**450-590 kcal**

These burns are already counted in your calorie targets. They are not extra food. Your fat loss comes from eating ~2,080 kcal on average. Smartwatches usually overestimate lifting calories by 30-50%, so trust these ranges over the watch.

How a set works

- **Weeks 1-2 (Basic):** do the sets as written. Last set of every exercise ends 1 rep short of failure.
- **Weeks 3-4 (Advanced):** same sets, plus the purple technique on each card on the last set only.
- **Machines and cables:** the last set goes to true failure, the rep you can't finish.
- **Barbell squat, bench, RDL:** always 1 rep short. Never grind these.
- **Progress:** top set hits the top of its range, add 2.5-5 kg next time.
- **Pairs:** do A, then B, then rest, repeat. Rest 60-90 sec unless the card says more.
- **Week 5:** deload: same exercises, 60% weight, half the sets. **Weeks 6-9:** Block B swaps.
